Foreword

The Canadian Transportation Research Forum was established in 1966 and its members consist of a broadly based group of transportation professionals with an interest in research and informed opinion on public policy.

In furtherance of this interest, the Canadian Transportation Research Forum sponsors a national conference in Canada every year. At this conference, invited speakers present their views together with their research papers. These research papers are discussed by the panel and the participating audience. The best papers are presented cash prizes to reward the outstanding work of the researchers and all the papers are published as part of the proceedings.

These proceedings have resulted in the accumulation of numerous volumes over the years, making it difficult for researchers to easily access the subject matter of their interests. To facilitate the task of researchers, it was decided to assemble these volumes in the form of a Bibliography of Canadian Transportation Research Forum Proceedings for the period 1983-2025. The initial year was chosen as 1983 as it was the first year in which the Canadian Transportation Research Forum printed its research papers. Prof. Barry Prentice has to be credited in completing this Bibliography.

In 2026, it was decided to begin a separate volume, as over the years the Bibliography had become too large and updating the initial volume was becoming increasingly unstable as the typing was done on different types of computers. This volume is a continuation of the earlier volume. In addition, the number of papers presented at each Conference has doubled which increases the size of the Bibliography. So readers will have to check the initial volume in searching for information on each subject before 2025.

This Bibliography consists of three basic parts. The first part is a listing of papers by subject. The second part is a listing as it appears in each volume of the annual proceedings. The final part consists of an index of authors. In addition, a fairly large table of contents is presented initially to shorten the search process for various topics of interest.

It is hoped that the present volume and additions to it in the future will be of assistance to the numerous researchers in transportation. Any shortcomings of this volume are solely the responsibility of the authors. Should anyone have any suggestions on how this volume can be improved so as to be of greater use, please feel free to contact the authors. Finally, the authors would like to thank the Canadian Transportation Research Forum for publishing this volume.

We would also like to thank the CTRF for any assistance in the past and for placing this Bibliography on their website.
